EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin Hart on March 4, 2009.

The application has been amended as follows:

In the claims:

In claim 9 at line one of the claim, delete the words "or transmission medium".

Allowable Subject Matter

2. Claims 1-16 are allowed.

Art Unit: 2188

3. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or suggest a method or storage containing code that when executed causes determining an amount of physical memory available and a minimum memory-mapped IO size, and sets the top of lower memory equal to 4GB minus a rounded memory-mapped IO size determined by 1) rounding it up to the next multiple of 128M if the physical memory is less than or equal to 4GB, or 2) by rounding it up to a next multiple of x, x a function of a number of DIMM socket pairs determined to be available, if the physical memory is greater than 4GB. This setting of the TOLM allows 6 memory type range registers (MTRRs) to completely specify caching characteristics of the address space, thus leaving 2 of the 8 available MTRRs for use in defining caching characteristics in the PCI memory range, as required by some types of applications.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Patent No:

7,404,063 Reclaims PCI address range, except for AGP aperture.

6,694,418 Cache space maximization by modifying memory holes.
